

COVER LETTER

Date: September 2, 2026

Dear Hiring Manager,

I'm David Matos, a Software Engineer based in Portugal with a foundation in Computer Science from the University of Porto and hands-on experience across backend development and applied AI. I'm reaching out because I'm actively looking for opportunities — particularly outside Portugal — where I can grow alongside experienced teams working on products at a larger scale.

During my internship at Cyient, I worked in a professional engineering environment where I applied backend technologies such as Python, and FastAPI to real-world projects, while also gaining exposure to containerized deployment with Docker and Kubernetes. This experience solidified my interest in backend systems that are reliable, scalable, and well-engineered from the ground up — and it also sparked a growing curiosity in how AI capabilities can be integrated into these systems in practical, production-ready ways.

Beyond the technical side, I spent two years as Vice President and Department Coordinator at NUCC, the Computer Science student association at FCUP. Leading initiatives, coordinating teams, and being accountable to a group taught me as much about communication and ownership as any codebase did. I also competed at a national level in handball for a decade, which shaped a work ethic built on discipline, consistency, and performing well under pressure — qualities I try to bring into every engineering challenge I take on.

What I'm looking for now is an environment where I can go deeper: work with engineers who'll challenge how I think, contribute to systems used at real scale, and build a stronger foundation in both backend engineering and AI. I'm drawn to teams that value clear thinking as much as clean code, and I'd bring genuine curiosity, reliability, and a strong appetite for learning to whichever one I join.

I'd welcome the chance to talk further about how I could contribute to your team.

Yours sincerely,

David Matos
